

PimpriChinchwad Education Trust's  
**PIMPRI CHINCHWAD COLLEGE OF ENGINEERING**

**SECTOR NO. 26, PRADHIKARAN, NIGDI, PUNE 411044**

**(An Autonomous Institute Approved by AICTE and Affiliated to SPPU, Pune)**

**Curriculum Structure and Syllabus**

of

**First and Second Year M. Tech. (VLSI and Embedded System)**  
**(Regulations 2024)**

**Effective from Academic Year 2024-25**

## Course Approval Summary

Board of Studies - Department of E&TC Engineering

Sr. No.	Name of the Course	Course Code	Page number	Signature and stamp of BoS chairman
1.	Digital Design using HDL	MET21PC01	15	
2.	Embedded System Design	MET21PC02	17	
3.	Digital Design using HDL Lab	MET21PC03	35	
4.	Embedded System Design Lab	MET21PC04	37	
5.	Elective I: Digital CMOS Design and Analysis	MET21PE01A	19	
6.	Elective I: Device Modelling for VLSI	MET21PE01B	21	
7.	Elective I: Advanced Embedded Processors	MET21PE01C	23	
8.	Elective I: Embedded Communication Protocol	MET21PE01D	25	
9.	Elective II: VLSI Testing and Design for Testability	MET21PE02A	27	
10.	Elective II: Micro computer Architecture and Modelling	MET21PE02B	29	
11.	Elective II: Embedded Processor Architecture and Design	MET21PE02C	31	
12.	Elective II: IOT in Embedded systems	MET21PE02D	33	
13.	Elective I Lab: Digital CMOS Design and Analysis Lab	MET21PE03A	39	
14.	Elective I Lab: Device Modelling for VLSI Lab	MET21PE03B	41	
15.	Elective I Lab: Advanced Embedded Processors Lab	MET21PE03C	43	
16.	Elective I Lab: Embedded Communication Protocol Lab	MET21PE03D	45	
17.	Elective II Lab: VLSI Testing and Design for Testability Lab	MET21PE04A	46	
18.	Elective II Lab: Micro computer Architecture and modelling Lab	MET21PE04B	48	
19.	Elective II Lab: Embedded Processor Architecture and Design Lab	MET21PE04C	50	
20.	Elective II Lab: IOT in Embedded Systems Lab	MET21PE04D	51	
21.	Research Methodology	MET22PC05	54	
22.	Elective III: System Verilog For Verification.	MET22PE05A	56	
23.	Elective III: Analog CMOS design	MET22PE05B	58	
24.	Elective III: Real Time Operating System	MET22PE05C	60	
25.	Elective III: Embedded Systems Applications	MET22PE05D	62	

26.	Elective IV: System on Programmable Chip	MET22PE06A	64	 <b>Chairman</b> B.S, Electronics & Telecommunication Engineering PCET's, Pimpri Chinchwad College of Engineering Sector No. 26, Pradhikaran, Nigdi, Pune-44
27.	Elective IV: ASIC Design	MET22PE06B	66	
28.	Elective IV: Edge Computing	MET22PE06C	68	
29.	Elective IV: Embedded AI	MET22PE06D	70	
30.	Elective III Lab: System Verilog For Verification Lab	MET22PE07A	72	
31.	Elective III Lab: Analog CMOS Design Lab	MET22PE07B	74	
32.	Elective III Lab: Real-Time Operating System Lab	MET22PE07C	76	
33.	Elective III Lab: Embedded Systems Applications Lab	MET22PE07D	78	
34.	Elective IV Lab: System on Programmable Chip Lab	MET22PE08A	80	
35.	Elective IV Lab: ASIC Design Lab	MET22PE08B	81	
36.	Elective IV Lab: Edge Computing Lab	MET22PE08C	83	
37.	Elective IV Lab: Embedded AI Lab	MET22PE08D	85	

**Approved by Academic Council:**

Chairman, Academic Council  
 Pimpri Chinchwad College of Engineering

  
**Chairman**  
 Academic Council  
 PCET's, Pimpri Chinchwad College of Engineering  
 Sector No. 26, Pradhikaran, Nigdi, Pune-44

## **Institute Vision**

To be one of the top 100 Engineering Institutes of India in coming five years by offering exemplarily Ethical, Sustainable and Value-Added Quality Education through a matching ecosystem for building successful careers.

## **Institute Mission**

1. Serving the needs of the society at large through establishment of a state-of-art Engineering Institute.
2. Imparting right Attitude, Skills, Knowledge for self-sustenance through Quality Education.
3. Creating globally competent and Sensible engineers, researchers and entrepreneurs with an ability to think and act independently in demanding situations.

## **EOMS Policy**

“We at PCCOE are committed to offer exemplarily Ethical, Sustainable and Value Added Quality Education to satisfy the applicable requirements, needs and expectations of the Students and Stakeholders.

We shall strive for technical development of students by creating globally competent and sensible engineers, researchers and entrepreneurs through Quality Education.

We are committed for Institute’s social responsibilities and managing Intellectual property.

We shall achieve this by establishing and strengthening state-of-the-art Engineering Institute through continual improvement in effective implementation of Educational Organizations Management Systems (EOMS).”

## INDEX

<b>Prior knowledge of</b> Digital Logic Design is essential.							
<b>Course Objectives:</b> This course aims at enabling students, 1. To introduce the concepts of modeling a digital system using Verilog hardware description Language. 2. To familiarize students with different levels of abstraction in Verilog. 3. To introduce concepts of logic synthesis and basics of verification.							
<b>Course Outcomes:</b> After learning the course, the students should be able to: 1. Understand evolution of CAD and HDL environment and Verilog basics. 2. Model combinational circuits in Dataflow modelling style. 3. Model combinational and sequential circuits in Behavioral style. 4. Gain the knowledge on Switch level modelling and testing of verilog codes. 5. Develop a test bench model for design under test.							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration [Hrs]</b>
1.	<b>Introduction: Evolution of CAD and HDL environment.</b> Verilog as HDL, Levels of Design Description, Concurrency, Simulation and Synthesis. Basics concepts: Lexical conventions, Datatypes, systems tasks and compiler directives. Module definition, Port declaration and connecting ports, hierarchical referencing						<b>09</b>
2.	<b>Gate Level Modeling:</b> Modelling of basic Verilog gate primitives, description of various gates, rise, fall and turn off delays, min, max and typical delays. <b>Data flow modelling:</b> continuous assignments, delay specifications, expressions, operator and operands. Blocking and Non-Blocking Assignments: The 'Case' Statement, 'If' and 'if-Else' Constructs, 'Assign- De-Assign' Constructs, 'Repeat' Construct, for loop, 'The Disable' Construct, 'While Loop', Forever Loop, sequential and Parallel Blocks						<b>09</b>

3.	<b>Behavioral Modeling:</b> Introduction, Operations and Assignments, Functional Bifurcation, Initial Construct, Always Construct, Design at Behavioral Level  <b>Structural Modeling:</b> Component declaration, component instantiation, Generics and Configuration. Packages and libraries.	<b>09</b>
4.	<b>Switch Level Modeling:</b> Basic Transistor Switches, CMOS Switches, Bi-Directional Gates, Time Delays with Switch Primitives, Instantiation with 'Strengths' and 'Delays' Strength Contention with Tri-reg Nets.	<b>09</b>
5	<b>Test bench:</b> Test bench for sequential and combinational circuits, Test pattern generation, test bench with initial block. Introduction to scoreboards, verification model and verification environment.	<b>09</b>
	<b>Total</b>	<b>45</b>

<b>Prior knowledge of</b> Basic fundamentals of electronic devices and integrated circuits <b>is essential.</b>							
<b>Objectives:</b> This course will enable students <ol style="list-style-type: none"> <li>1. Explain the fundamentals of CMOS Technology and its various performance parameters.</li> <li>2. Explore the techniques of designing digital VLSI systems.</li> <li>3. Describe design concepts of data path and memory subsystems</li> </ol>							
<b>Outcomes:</b> <b>After learning the course, the students should be able to:</b> <ol style="list-style-type: none"> <li>1. To understand basic MOS transistor theory and effects of scaling.</li> <li>2. To estimate the delay of logic networks and also analyse logical efforts</li> <li>3. To compare combinational circuit design using CMOS, transmission gate and pass transistor logic.</li> <li>4. To prepare the layout and estimate the area on chip of combinational circuits and sequential using CMOS</li> <li>5. To understand design principles and techniques of data path and memory subsystems</li> </ol>							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration</b>
1.	<b>MOS Transistor Theory and Analysis:</b> Basic Electrical Properties of MOS Circuits: Ids-Vds Relationships, MOS Transistor Threshold Voltage $V_{th}$ , MOS Capacitance models, MOS Gate Capacitance Model, MOS Diffusion Capacitance Model, Technology scaling, Lambda parameter, non-ideal I-V Effects CMOS Inverter Transfer Characteristics and Analysis and Design, Latch up in CMOS Circuits.						8

2.	<b>CMOS Performance Parameters:</b> Static, dynamic and short circuit power dissipations, Propagation delay, Power delay product, Fan in, fan out and dependencies. Delay Estimation: RC Delay Models, Linear Delay Model, Logical Effort, Parasitic Delay. Logical Effort and Transistor Sizing: Delay in a Logic Gate, Delay in Multistage Logic Networks.	8
3.	<b>Logic Design-I:</b> Static CMOS Logic: Inverter, NAND Gate, NOR Gate, Design of Combinational logic, Multiplexers, decoders, Compound Gates, Pass Transistors and Transmission Gates, Tristate, Stick Diagram and Layout Design, Design calculations for combinational logic and active area on chip; Hazards, sources and mitigation techniques, Design Examples	10
4.	<b>Logic Design – II</b> Timing Metrics for Sequential Circuits, Static Latches and Registers, Dynamic Transmission-Gate Based Edge-triggered Registers, Pulse Registers, Sense-Amplifier Based Registers, Meta-stability issues and solutions; Design Examples,	9
5.	<b>Datapath and Memory Subsystems:</b> Adders, Multipliers, Comparators, Parity Generators, Registers and Counters, Introduction to SRAM, DRAM, ROM, Serial access memories; CAM	10
	<b>Total</b>	<b>45</b>
<b>Text Books:</b>

<b>03</b>	<b>03</b>	<b>--</b>	<b>--</b>	<b>20</b>	<b>20</b>	<b>60</b>	<b>100</b>
<b>Prior knowledge of</b>							
1. Basic electronics devices and circuits <b>is essential.</b>							
<b>Course Objectives:</b>							
1. Introduce various device modeling techniques with analytical, and numerical approaches.							
2. Explore advanced device models such as high-frequency.							
3. Teach methods for validating device models through comparison with experimental data or theoretical predictions.							
<b>Course Outcomes:</b>							
After completion of this course, students will be able to,							
1. Gain an understanding of semiconductor device physics, and device operation principles.							
2. Develop proficiency in using simulation tools to model semiconductor devices and circuits accurately.							
3. Utilize device models to optimize the design of integrated circuits.							
4. Apply device modeling techniques to solve engineering problems related to circuit design, optimization, and performance prediction.							
5. Ability to critically analyze device models, understand their limitations, and select appropriate models for specific applications.							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration</b>
1.	<b>MOSFET Fundamentals:</b> MOS capacitor structure and operation. MOSFET operation modes. <b>Advanced Semiconductor Devices:</b> High-frequency effects in semiconductor devices, Temperature-dependent behaviour and thermal effects, Reliability considerations: breakdown mechanisms, aging effects. <b>Device Modelling Basics:</b> Introduction to device modelling: empirical, analytical, and numerical methods, Overview of SPICE and TCAD simulation tools for device modelling.						<b>9</b>
2.	<b>Introduction to Simulation Tools:</b> Overview of simulation tools used in VLSI design. Introduction to SPICE (Simulation Program with Integrated Circuit Emphasis) / TCAD (Technology Computer-Aided Design) tools. <b>Basic SPICE Simulation:</b> Understanding SPICE syntax and input file formats. Building basic circuit models for passive components and ideal sources. Performing DC, AC, and transient analyses. Modelling semiconductor device characteristics						<b>9</b>

3.	<b>Introduction to IC Design Optimization:</b> Overview of design optimization objectives. Importance of accurate device modeling in IC design optimization. <b>Device Modeling Techniques for Optimization:</b> Modeling techniques: empirical, analytical, and numerical. Parameter extraction methods for accurate device modeling. <b>Power Consumption Optimization:</b> Understanding power consumption sources in ICs: dynamic power, static power, and leakage power. Power optimization techniques including voltage scaling, clock gating, and power gating.	9
4.	<b>Introduction to Device Modelling Applications:</b> Overview of the role of device modelling in circuit design, optimization, and performance prediction. Importance of accurate device models in engineering problem-solving. <b>Modelling Techniques for Circuit Design:</b> Introduction to compact models for circuit simulation. Techniques for designing and optimizing electronic circuits using device models.	9
5	<b>Understanding Device Limitations:</b> Identifying key parameters and characteristics of devices, Sources of inaccuracies and limitations in device models. Matching device models to application requirements. Selecting between different types of device models. <b>Advanced Topics in Device Modelling :</b> Multi-scale modelling approaches Machine learning and artificial intelligence techniques in device modelling Emerging trends and future directions in device modelling.	9
	<b>Total</b>	45

<b>Course Objectives:</b>							
<ol style="list-style-type: none"> <li>Develop a strong foundational understanding of embedded systems and processor evolution.</li> <li>Cultivate proficiency in analyzing, designing, and implementing ARM-based processor systems, utilizing ARM development tools effectively.</li> <li>Foster critical thinking and problem-solving skills through practical exercises and projects focusing on SoC design and embedded system security.</li> </ol>							
<b>Course Outcomes:</b>							
After completion of this course, students will be able to,							
<ol style="list-style-type: none"> <li>Understand embedded systems basics, processor evolution, and ARM architecture's and Cortex-M series's significance.</li> <li>Comprehend ARM processor architecture, including instruction sets, operating modes, and key features of ARM Cortex-M variants.</li> <li>Be proficient in utilizing ARM development tools for cross-compiling, debugging, optimization, and troubleshooting.</li> <li>Possess the knowledge and skills to design and integrate processors, memories, and peripherals into SoC architectures.</li> <li>Identify and mitigate embedded system security threats, implement secure booting mechanisms, and design secure communication protocols.</li> </ol>							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration</b>
1.	<b>Introduction to Embedded Processors</b> Basics of embedded systems, design challenges, evolution of processors (CISC, RISC), embedded processor applications, ARM architecture introduction, ARM Cortex-M overview, ARM advantages, industry adoption, trends in embedded processors (low-power, AI acceleration).						9
2.	<b>ARM Architecture Fundamentals</b> ARM processor architecture, core components, ARM instruction sets (ARM, Thumb, Thumb-2), ARM operating modes, exception handling, ARM registers, memory organization, ARM Cortex-M variants, key features, ARM design considerations (power, performance, cost), advanced ARM features (NEON, TrustZone).						9
3.	<b>ARM Development Tools</b> ARM toolchain overview (compilers, debuggers, IDEs), ARM cross-compilation, build systems, debugging techniques (JTAG, SWD), emulators, simulators, virtual platforms, real-time analysis, profiling						9

	tools, code optimization tools, optimization techniques, integrating ARM tools into workflows, troubleshooting, debugging common issues.	
4.	<b>System-on-Chip (SoC) Design</b> SoC design fundamentals, challenges, integration of processors, memories, peripherals, advanced SoC architectures (multicore, heterogeneous), hardware accelerators, co-processors, low-power SoC design techniques, FPGA-based SoC design, prototyping, case studies, examples of SoC designs.	9
5	<b>Embedded System Security</b> Introduction to system security, threats, secure booting, chain of trust, cryptographic principles, algorithms, hardware security modules, trusted execution environments, secure communication protocols (TLS, IPsec), secure software development practices, security case studies, real-world examples, implementing security measures, future trends in embedded system security.	9

<b>Prior Knowledge of</b> Microcontrollers, Microprocessors Programming language 'C', Embedded C <b>is essential.</b>							
<b>Objectives:</b> To impart knowledge on 1. _ Serial and parallel communication protocols 2. _ Application Development using wired and wireless communication protocols							
<b>Outcomes:</b> After learning the course the students should be able to: 1. Select Protocols for real time Application 2. Interface USB protocol for real time applications. 3. Program and Interface CAN based communication protocol. 4. Select appropriate wireless protocol on the basis of applications 5. Design and estimate use of communication protocol in real time applications							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration (Hrs)</b>
1.	<b>EMBEDDED COMMUNICATION PROTOCOLS</b> Embedded Networking: Introduction–Serial / Parallel Communication–Serial communication protocols -RS232 standard – RS485 – Synchronous Serial Protocols - Serial Peripheral Interface (SPI) – Inter Integrated Circuits (I2C) – PC Parallel port programming -ISA/PCI Bus protocols – Firewire						<b>10</b>
2.	<b>USB AND CAN BUS</b> USB bus – Introduction – Speed Identification on the bus – USB States – USB bus  communication: Packets –Data flow types –Enumeration –Descriptors – Microcontroller USB Interface, CAN Bus – Introduction - Frames –Bit stuffing –Types of errors – Nominal Bit Timing						<b>9</b>
3.	<b>CONTROLLER AREA NETWORK</b> Controller Area Network – Underlying Technology, CAN Overview – Selecting a CAN Controller – CAN development tools. Implementing CAN open Communication layout and requirements – Comparison of implementation methods – Micro CAN open – CAN open source code – Conformance test – Entire design life cycle.						<b>8</b>

<b>Prior knowledge of</b>							
1. Basic computer organization and architecture and HDL <b>is essential.</b>							
<b>Course Objectives:</b>							
1. Introduce fundamentals of microcomputer architecture like instruction set architecture (ISA), memory hierarchy, and I/O subsystems.							
2. Explore advanced concepts in microarchitecture design.							
3. Make students aware of performance, power consumption, and reliability aspects of microcomputer architectures.							
1. Explore emerging trends and technologies in microcomputer design							
<b>Course Outcomes:</b>							
After completion of this course, students will be able to,							
1. Describe the key components and organization of a microcomputer system, including the CPU, memory subsystem, and I/O interfaces.							
2. Analyse and compare different microcomputer architectures based on their performance, power efficiency, and scalability.							
3. Design and implement basic microarchitectural features such as pipelining, instruction-level parallelism, and memory hierarchy optimizations.							
4. Develop models and simulations of microcomputer systems using industry-standard tools such as Verilog, VHDL, or System Verilog.							
5. Evaluate the performance and efficiency of microcomputer architectures through simulation, profiling, and benchmarking techniques.							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration</b>
1.	<b>Introduction to Microcomputer Systems, Central Processing Unit (CPU):</b> Role and function of the CPU in a microcomputer system, Components of ALU, CPU architecture and instruction set architecture (ISA), Types of instruction formats and addressing modes. <b>Memory Subsystem:</b> Types of memory, Memory hierarchy, management techniques. Memory organization and addressing schemes. <b>Input/Output (I/O) Interfaces:</b> Role of I/O interfaces in connecting external devices to the microcomputer system, Types of I/O devices, operations. Communication protocols and standards for I/O interfaces (e.g., USB, PCI).						8
2.	Instructions and Operations: MIPS Architecture, MIPS subroutine. Addition, Subtraction, Logic Operations and ALU Design, Multiply, Shift and Divide, Floating Point arithmetic and, Designing a single cycle datapath						8

3.	Single cycle control, Designing a multicycle Processor, Exceptions and pipelining basics, Pipeline data path design. Pipeline control and exceptions, Memory Hierarchy and Cache Design	<b>8</b>
4.	<b>Introduction to Verilog/ VHDL for microcomputer design:</b> Microarchitecture Design: CPU architecture overview (e.g., RISC, CISC), Instruction set architecture (ISA) design, Pipeline architecture design. Designing basic components: registers, multiplexers, ALU, Developing modules for CPU components: control unit, arithmetic logic unit (ALU), registers, Hierarchical design and module instantiation.	<b>8</b>
5	Calculating and improving cache performance. Cache Associativity and Virtual Memory. VLIW processor Introduction, Instruction Scheduling, Compiler Design issues, 32 bit processor architecture: case study-1, 64 bit processor architecture: case study	8
	<b>Total</b>	45

**Prior Knowledge of**  
Basics of Embedded Systems, VHDL programming **Is Essential**

**Objectives:**

1. To explain architecture fundamentals of processor design
2. To explain memory management of CISC and RISC processors
3. To deliver knowledge of architecture and design issues in DSP
4. To update the information with respect to run time re-configurable processors

**Outcomes:**

After learning the course the students should be able to:

1. Apply knowledge about basic components of embedded processor architecture and visualize probable Problems, fallacies and Pitfalls in Processor Design.
2. Understand Extreme CISC and RISC, Very Long Instruction Word (VLIW), overly aggressive pipelining, unbalanced processor.
3. Design and implement Processor functional components like Datapath and Control..
4. Analyse the difference between DSP and Customizable processor architecture.
5. Select appropriate Clock distribution and power distribution in SoC design.

**Detailed Syllabus:**

<b>Unit</b>	<b>Description</b>	<b>Duration (Hrs)</b>
<b>1.</b>	<b>Embedded Computer Architecture Fundamentals I:</b> Components of an embedded computer, Architecture organization, ways of parallelism, I/O operations and peripherals. Problems, Fallacies, and Pitfalls in Processor Design for a high level computer instruction set architecture to support a specific language or language domain. Use of intermediate ISAs to allow a simple machine to emulate it's betters, stack machines, overly aggressive pipelining, unbalanced processor design, Omitting pipeline interlocks, Non-power-of-2 data-word widths for general-purpose computing	<b>9</b>
<b>2.</b>	<b>Processor Design Flow and Memory :</b> Capturing requirements, Instruction coding, Exploration of architecture organizations, hardware and software development. Extreme CISC and extreme RISC, Very long instruction word (VLIW).Memory: Organization, Memory segmentation, Multithreading, Symmetric multiprocessing.	<b>8</b>
<b>3.</b>	Processor Design Methodology: CISC Processor Design: Defining microprocessor, hardware flowchart, implementing from flowchart, exception, control store, microcode design. RISC Processor Design: Building data path and controller, single cycle implementation, multi cycle implementation, pipelined implementation, exception and hazards handling.	<b>10</b>

**Prior knowledge of**

Digital Communication, Microcontrollers & Computer Networks  
**is essential.**

**Course Objectives:**

This course aims at enabling students,

1. To explain fundamentals of IoT and embedded system including essence, basic design strategy and process modeling.
2. To introduce students a set of advanced topics in embedded IoT and lead them to understand research in network.
3. To develop comprehensive approach towards building small low cost embedded IoT system.
4. To give details fundamentals of security for IoT and real-world application scenarios of IoT along with its societal and economic impact using case studies

**Course Outcomes:**

After learning the course, the students should be able to:

1. Describe basic components of IoT and identify different components of IoT based design
2. Demonstrate the knowledge of basics of Embedded System.
3. Selection of IoT protocols for designing of IoT based application
4. Apply appropriate security mechanisms for IoT based real time applications
5. Selection of an appropriate cloud platform for IoT based applications.

**Detailed Syllabus:**

<b>Unit</b>	<b>Description</b>	<b>Duration [Hrs]</b>
<b>I</b>	<b>Introduction to Internet of Things</b> IoT: Definition and characteristics of IoT, Sensors, actuators and other devices employed in IoT, Physical design of IoT, Logical design of IoT, IoT architecture, IoT Gateway, IoT Issues and Challenges, IoT Enabling Technologies.	9
<b>II</b>	<b>Introduction to Internet of Things</b> An introduction to Embedded System, Types and applications of embedded system, The embedded system constraints: Processing units: microprocessors, microcontrollers, SoCs, ASICs, DSPs, FPGAs, etc.	9
<b>III</b>	<b>IoT Protocols</b> Introduction to IoT Protocols: Bluetooth, Zigbee, Wi-Fi, IPv4, IPv6, 6LowPAN, Mod Bus, CAN bus, MQTT, CoAP, AMQP	9

IV	<b>IoT Security</b> Vulnerabilities of IoT, Security Requirements, Challenges for Secure IoT, Key elements of IoT Security: Identity establishment, Access control, Data and message security, IoT attacks, Security model for IoT	9
5	<b>Cloud Offerings:</b> Introduction to Cloud: Thingspeak, IFTTT, Case Studies: Home Automation System, Home Intrusion System, Smart irrigation system, Waste Management System.	9
	<b>Total</b>	45

<b>Course</b>	<b>Digital Design using HDL Lab</b>			<b>Code</b>	<b>MET21PC03</b>		
<b>Credits</b>	<b>Teaching Scheme (Hrs./Week)</b>			<b>Evaluation Scheme and Marks</b>			
	<b>Lecture</b>	<b>Practical</b>	<b>Tutorial</b>	<b>TW</b>	<b>PR</b>	<b>OR</b>	<b>Total</b>
2	-	4	-	25	-	25	50

**Prior knowledge of:**

Digital logic design is essential.

**Course Objectives:**

This course will enable students

1. To introduce to behavior and RTL modelling of digital circuits using Verilog HDL, verifying and synthesizing RTL models to FPGAs.
2. To expose to practical experience by designing, modelling, implementing and verifying several digital circuits.

**Course Outcomes:**

After learning the course, the students will be able to:

1. Demonstrate the function of adder/subtractor circuits using Verilog.
2. Model and synthesize Multiplexers Decoders, Encoders circuits using Verilog.
3. Model and synthesize different Flip-flops and counters using Verilog and implement on FPGA.
4. Use FPGA/CPLD kits for down loading Verilog codes for shift registers and counters and check output.

**Detailed Syllabus**

<b>Assignment No.</b>	<b>Suggested List of Assignments (Any 6)</b>
1.	Introduction to Front end design flow and PLDs( FPGA)
2.	Modelling of adder Adder – Half/Full a. Model an adder in dataflow and structural modelling. b. Perform synthesis and verify using test bench. c. Implement the verified design on FPGA.
3.	Modeling of ALU for any 8 arithmetic and logical operation. a. Model ALU as a multiplexer using behavioral meddling b. Perform synthesis and verify using test bench. c. Implement the verified design on FPGA
4.	Modeling of n:1 Multiplexer and n: 2n decoder. a. Model n:1 Multiplexer and n: 2n decoder using behavioral meddling b. Perform synthesis and verify using test bench. c. Implement the verified design on FPGA.
5.	Modelling a Flip Flop and shift register using Verilog in behavioral modelling. a. Model an Active low asynchronous reset and active high synchronous reset b. Perform synthesis and verify using test bench. c. Implement the verified design on FPGA
6.	Write Verilog Description for sequence detector FSM usng both moore and melay machine to detect alternate 1's and 0's till 4 bits.
7.	Modelling a counter. a. Model a counter using behavioral meddling b. Perform synthesis and verify using test bench. c. Implement the verified design on FPGA.

**Prior knowledge of**

Microcontroller Applications and Advanced Microprocessors **Is Essential.**

**Objectives :**

1. To explore architecture and features of typical ARM7 Processor.
2. To demonstrate Software design flow for ARM7 using Keil Software
3. To improve the skills related interfacing of real world input and output devices and embedded communication systems.

**Outcomes:**

After learning the course the students should be able to:

1. Explore multi-pin functionality of ARM7 Pin connect block for GPIO interfacing.
2. Write an ARM 7 microcontroller-based programs to interface various peripherals
3. Implement interfacing for peripheral-specific applications.

**Guidelines :**

Total experiments to be conducted are **6 experiments of 24 hours**

**Detailed Syllabus:**

<b>Expt</b>	<b>Description</b>	<b>Duration (Hrs)</b>
<b>1.</b>	Design and Configure programming model for GPIO in ARM7 Implement LED Blinking on pressing a switch using GPIO	<b>6</b>
<b>2.</b>	Design and configure GPIO for Keypad and LCD interfacing with ARM7 Implement Keypad and LCD interfacing on LPC2148	<b>6</b>
<b>3.</b>	Design and configure UART Programming model and Implement of UART interfacing with ARM7 board and PC for sending and receiving message.	<b>6</b>
<b>4.</b>	Design and configure External Interrupt handling using External Interrupt Pin : P0.30 (EINT3) Implement response program for handling external interrupt	<b>6</b>
<b>5.</b>	Design and configure register model I2C protocol	<b>6</b>

	Implement I2C protocol for interfacing on board EEPROM	
<b>6.</b>	Design and implement Temperature control circuit using LM 35 and DC motor (PWM Generation)	<b>6</b>
<b>7.</b>	Design and Implement RTC interfacing with ARM7 and LCD display	<b>6</b>
<b>8.</b>	Design Real time Application using ARM 7 and peripheral : A Case Study	<b>12</b>
	<b>Total</b>	<b>60</b>

<b>Prior knowledge of:</b> Digital Systems is essential.							
<b>Course Objectives:</b> This course will enable students <ul style="list-style-type: none"> <li>1. To illustrate fundamentals of NMOS, PMOS and CMOS</li> <li>2. To expose to practical experience by designing, modelling, implementing and verifying several digital circuits.</li> </ul>							
<b>Course Outcomes:</b> After learning the course, the students will be able to: <ul style="list-style-type: none"> <li>1. Analyse the characteristics of NMOS, PMOS and CMOS circuits</li> <li>2. Demonstrate the function of digital circuits using suitable tool</li> <li>3. Design the layout of combinational and sequential circuits</li> </ul>							
<b>Detailed Syllabus:</b>							
<b>Expt. No.</b>	<b>Description</b>						<b>Duration</b>
1	To plot the (i) output characteristics & (ii) transfer characteristics of an n-channel and p-channel MOSFET.						2
2	To design and plot the static (VTC) and dynamic characteristics of a digital CMOS inverter.						2
3	To design and plot the output characteristics of a 3-inverter ring oscillator.						6
4	To design and plot the dynamic characteristics of 2-input NAND, NOR, XOR and XNOR logic gates using CMOS technology						6
5	To design and plot the characteristics of a 4x1 digital multiplexer using pass transistor logic.						6
6	To design and plot the characteristics of a positive and negative latch based on multiplexers.						6
7	To design and plot the characteristics of a master-slave positive and negative edge triggered registers based on multiplexers.						6
8	To design and implement memory subsystem						6
9	To prepare a stick diagram and layout of combinational circuit						4
10	To prepare a stick diagram and layout of sequential circuit						4
11	Miniproject / Case study implementation						12
<b>Total</b>						<b>60</b>

**Prior knowledge of:**

Basics of electronics devices and circuits

**Is essential.**

**Course Objectives:**

1. Introduce various device modeling techniques with analytical, and numerical approaches.
2. Explore advanced device models such as high-frequency models, temperature-dependent models, and reliability models.
3. Teach methods for validating device models through comparison with experimental data or theoretical predictions.

**Course Outcomes:**

After completion of this course, students will be able to,

1. Gain a understanding of semiconductor device physics and device operation principles.
2. Develop proficiency in using simulation tools to model semiconductor devices and circuits accurately.
3. Apply device modeling techniques to solve engineering problems related to circuit design, optimization, and performance prediction.

**Detailed Syllabus**

<b>Assignment No.</b>	<b>Suggested List of Assignments</b>	<b>Duration</b>
1.	Introduction to SPICE Simulation: Familiarize students with SPICE simulation software (e.g., LTspice)	<b>6</b>
2.	Introduction to SPICE Simulation: Create simple circuit simulations (e.g., resistor networks, basic diode circuits) to understand SPICE syntax and simulation setup.	<b>6</b>
3.	DC Characteristics of Diodes: Simulate the current-voltage (IV) characteristics of different diode types.	<b>6</b>
4.	MOSFET DC Modeling: Simulate the DC characteristics of MOSFETs (NMOS and PMOS). Investigate the threshold voltage, transconductance, and output characteristics of MOSFETs under different biasing conditions.	<b>6</b>

5	Small-Signal Analysis of MOSFETs: Perform small-signal AC analysis of MOSFET amplifiers. Study the gain, input/output impedance, and frequency response of MOSFET amplifier circuits.	6
6	MOSFET Transient Analysis: Simulate transient response in MOSFET circuits. Analyze rise/fall times, propagation delays, and ringing effects in MOSFET-based digital circuits.	6
7	Advanced MOSFET Modeling: Implement advanced MOSFET models (e.g., BSIM, PSP) in SPICE simulations. Compare the accuracy and performance of different MOSFET models for various circuit configurations.	6
8	Project-Based Experiment: Assign a project where students design and simulate a VLSI circuit (e.g., an amplifier, an oscillator) using device modeling techniques learned throughout the course.	6

<b>Course Outcomes:</b>							
After completion of this course, students will be able to,							
<ol style="list-style-type: none"> <li>1. Demonstrate proficiency in installing, configuring, and utilising ARM Development Tools.</li> <li>2. Exhibit competence in writing ARM assembly and C programs to perform basic arithmetic and bitwise operations.</li> <li>3. Apply embedded software skills to practical tasks like controlling devices.</li> <li>4. Utilize problem-solving skills by applying software principles effectively to develop efficient embedded software solutions.</li> </ol>							
<b>Detailed Syllabus: Perform any 8 experiments.</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration</b>
1.	Install and configure the ARM Development Tools (ARM Keil MDK, DS-5, etc.) on a development workstation.						<b>06</b>
2.	Write an ARM assembly program to perform basic arithmetic operations (addition, subtraction, multiplication, division) using the ALU.						<b>06</b>
3.	Develop an ARM assembly program to implement bitwise operations (AND, OR, XOR, shift) on data using the ALU.						<b>06</b>
4.	Write a C program to blink an LED using GPIO on the ARM development board (e.g., STM32F4 Discovery Board).						<b>06</b>
5.	Develop a C program to communicate with an external device using UART on the ARM development board.						<b>06</b>
6.	Develop a C program to read analog data from an ADC and display it on an LCD using the ARM development board.						<b>06</b>
7.	Write a C program to handle external interrupts from a push-button on the ARM development board.						<b>06</b>
8.	Write a C program to interface with an SPI-based external memory device on the ARM development board.						<b>06</b>
9.	Develop a C program to interface with a sensor (e.g., temperature, accelerometer) using I2C or SPI protocol on the ARM development board.						<b>06</b>
10.	Develop a program to control an external servo motor using PWM on the STM32F4 Discovery Board.						<b>06</b>
11.	Implement a simple user interface with buttons and LEDs to control the servo motor on the STM32F4 Discovery Board.						<b>06</b>

12.	Develop a C program to implement a simple real-time operating system (RTOS) task scheduler and task management on the ARM development board.	<b>06</b>

<b>Course Objectives:</b>							
<p>These practical sessions are designed to provide hands-on experience with essential VLSI testing techniques, methodologies, and tools, allowing students to gain practical insights into testing complex VLSI circuits effectively.</p>							
<b>Course Outcomes:</b>							
<p>After completion of this course, students will be able to,</p> <ol style="list-style-type: none"> <li>1. Demonstrate proficiency in designing and implementing fault simulation programs for single stuck-at faults in VLSI circuits.</li> <li>2. Design and apply test patterns using scan design methodologies, measure fault coverage improvements compared to non-scan designs and effectively evaluate the impact of DFT techniques on testing efficiency and reliability.</li> <li>3. Showcase proficiency in developing Random Logic BIST processes for complex VLSI designs.</li> </ol>							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration</b>
1.	<p><b>Fault Simulation and Analysis:</b></p> <p>Design a fault simulation program that can analyze a given VLSI circuit for single stuck-at faults. Evaluate the effectiveness of the simulation by comparing simulated results with expected outcomes and generate a detailed fault report.</p>						<b>8</b>
2.	<p><b>DFT Implementation:</b></p> <p>Implement a scan design technique for a specific VLSI circuit to enhance testability. Design and apply test patterns to the circuit using the implemented scan design, and measure the improvement in fault coverage compared to non-scan designs.</p>						<b>8</b>
3.	<p><b>BIST Process Development:</b></p> <p>Develop a Random Logic BIST process for a complex VLSI design. Generate test patterns, perform pattern compression, and evaluate the efficiency of the BIST process in detecting and diagnosing faults within the circuit.</p>						<b>8</b>

4.	<b>Boundary Scan Testing:</b>  Configure a VLSI circuit with Boundary Scan Standard compliance. Write Boundary Scan Test Instructions (BSTI) to perform comprehensive testing, including connectivity testing and boundary scan chain verification, and validate the effectiveness of the boundary scan testing methodology.	<b>8</b>
5	<b>Memory BIST Implementation:</b>  Implement a Memory BIST (MBIST) system for testing embedded memories within a VLSI design. Develop pattern generation algorithms, implement response compaction techniques, and evaluate the MBIST system's performance in detecting and diagnosing memory-related faults	<b>8</b>
6	<b>Advanced Testability Measures:</b>  Explore advanced testability measures such as SCOAP controllability and observability analysis for a VLSI circuit. Conduct a comprehensive testability analysis, identify critical nodes for testing, and optimize test patterns to maximize fault coverage while minimizing testing overhead	<b>8</b>
7	<b>Mini Project</b>	<b>12</b>

**Prior knowledge of:**

Basics of computer organization, architecture and HDL

**Is essential.**

**Course Objectives:**

1. Introduce fundamentals of microcomputer architecture like instruction set architecture (ISA), memory hierarchy, and I/O subsystems.
2. Explore advanced concepts in microarchitecture design.
3. Make students aware of performance, power consumption, and reliability aspects of microcomputer architectures.
4. Explore emerging trends and technologies in microcomputer design

**Course Outcomes:**

After completion of this course, students will be able to,

1. Describe the key components and organization of a microcomputer system, including the CPU, memory subsystem, and I/O interfaces.
2. Analyse and compare different microcomputer architectures based on their performance, power efficiency, and scalability.
3. Design and implement basic microarchitectural features such as pipelining, instruction-level parallelism, and memory hierarchy optimizations.
4. Develop models and simulations of microcomputer systems using industry-standard tools such as Verilog, VHDL, or System Verilog.
5. Evaluate the performance and efficiency of microcomputer architectures through simulation, profiling, and benchmarking techniques.

**Detailed Syllabus**

<b>Assignment No.</b>	<b>Suggested List of Assignments</b>	<b>Duration</b>
1.	Design basic CPU architecture and finalize the specification. It should include <ul style="list-style-type: none"> <li>● Instruction Memory (IM): Stores the instructions to be executed.</li> <li>● Data Memory (DM): Stores data accessed by the CPU.</li> <li>● Arithmetic Logic Unit (ALU): Performs arithmetic and logic operations.</li> <li>● Control Unit (CU): Decodes instructions and controls the operation of the CPU.</li> </ul>	<b>6</b>

	<ul style="list-style-type: none"> <li>Registers: Temporary storage for data and instructions.</li> </ul>	
2.	Design and implement ALU in VHDL /Verilog for above specification and verify using test bench.	<b>6</b>
3.	Design and implement CU-control unit in VHDL /Verilog for above specification and verify using test bench.	<b>6</b>
4.	Design and implement DM-Data path in VHDL /Verilog for above specification and verify using test bench.	<b>6</b>
5	Design and implement pipelined data path in VHDL /Verilog for above specification and verify using test bench.	<b>6</b>
6	Design and implement 16 bit adder in VHDL /Verilog for above specification and verify using test bench.	<b>6</b>
7	Design and implement 16 bit multiplier in VHDL /Verilog for above specification and verify using test bench.	<b>6</b>
8	Integrate above all units as top level module and synthesis a complete CPU architecture.	<b>6</b>
	<b>Total</b>	48

**Prior knowledge of is essential.** Digital Design and Verilog HDL.

**Course Objectives:**

This course aims to help students understand Verification Methodologies in System Verilog and object-oriented Programming (OOP) concepts, learn System Verilog Assertions and Testbench building, gain proficiency in Randomization techniques and Functional Coverage, and acquire skills in Universal Verification Methodology (UVM) for advanced verification environments.

**Course Outcomes:**

- After completion of this course, students will be able to,
1. Implement the various Verification Methodologies.
  2. Illustrate the concepts of System Verilog OOP terminology.
  3. Identify common randomization problems and learn debugging techniques to address them.
  4. Analyze the concepts of functional coverage.
  5. Create an essential UVM Environment.

**Detailed Syllabus:**

<b>Unit</b>	<b>Description</b>	<b>Duration</b>
1.	<b>Verification Methodology Overview:</b> Introduction to Verification Methodology, Verification Process, Verification Environment Architecture, System Verilog Introduction & Logic Data Type, Operators, Procedures Statements and Procedural Blocks, System Verilog Tasks & Functions, System Verilog Interfaces.	<b>9</b>
2.	<b>Object Oriented Programming:</b> Introduction, Class Data Type & Objects, User-Defined Data Types and Structures, Inheritance & Super, Static properties & methods and Pass by ref, Polymorphism, Virtual & Parameterized classes, System Verilog Assertions, Immediate Assertions, Concurrent Assertions, Building a Testbench.	<b>9</b>
3.	<b>Randomization:</b> Introduction, randomization, Randomization in SystemVerilog, Constraint details, solution probabilities, controlling multiple constraint blocks, Valid constraints, In-line constraints, The pre_randomize and post_randomize functions, Constraints tips and techniques, common randomization problems.	<b>9</b>

4.	<b>Functional Coverage:</b> Interprocess Communication, Events, Semaphores, Mailboxes, Coverage Types, Functional Coverage Strategies, Simple Functional Coverage Example, Anatomy of a Cover Group, triggering a Cover Group, Data Sampling, Cross Coverage, Generic Cover Groups, Coverage Options, Analyzing Coverage Data, Measuring Coverage Statistics During Simulation.	<b>9</b>
5	<b>Universal Verification Methodology (UVM):</b> Introduction to UVM Methodology, UVM Environment & Components, Stimulus Modeling, Simulation Phases, and Building a Basic UVM testbench.	<b>9</b>
	<b>Total</b>	<b>45</b>

<b>Prior knowledge of</b> Basic fundamentals of electronic devices and integrated circuits <b>is essential.</b>							
<b>Objectives:</b> This course will enable students <ol style="list-style-type: none"> <li>1. Explain the concepts of analog circuits design using MOS small signal models</li> <li>2. Demonstrate design principles and techniques of CMOS sub-circuits and CMOS Amplifiers</li> <li>3. Describe the concept of stability and explain methods of frequency compensation.</li> </ol>							
<b>Outcomes:</b> <b>After learning the course, the students should be able to:</b> <ol style="list-style-type: none"> <li>1. Describe the small signal models MOS technologies</li> <li>2. Design current sources and voltage references</li> <li>3. Design single-ended differential amplifiers</li> <li>4. Analyze and design operational amplifiers</li> <li>5. Explain different techniques of frequency compensation</li> </ol>							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration</b>
1.	<b>MOS DEVICES AND MODELING:</b> Introduction to analog design, Analog integrated circuit design considerations, The MOS Transistor, Passive Components- Capacitor & Resistor MOSFET Modeling: MOS transistor Low frequency MOSFET Models, High frequency MOSFET Models, temperature effects in MOSFET, Noise in MOSFET						8
2.	<b>CMOS Sub circuits:</b> MOS as a switch, MOS Diode/Active resistor, Current Source, Sinks, Simple current sinks and mirror, Basic current mirrors, advance current mirror, Current and Voltage references, Bandgap references						8
3.	<b>Single stage amplifiers:</b> Common-Source stage (with resistive load, diode connected load, current-source load, triode load, source degeneration), source follower, common-gate stage, Cascode stage, Folded Cascode stage. Frequency responses of CS stage, CD stage, CG stage, Cascode stage, simulation of CMOS amplifiers using SPICE. Performance's matrices of amplifier circuits						10

4.	<b>CMOS Differential Amplifier:</b> Single ended and Differential Operation, Qualitative and Quantitative Analysis of Differential pair, Common Mode response, Gilbert Cell. Differential signaling: Differential to single ended conversion, source coupled pair, Current source load, CMOS Differential amplifier with current mirror load, small signal analysis of differential amplifier, Performance parameters,	9
5.	<b>CMOS Operational Amplifier:</b> Block diagram of Op-amplifier, Ideal characteristics of Op-Amplifier, Design procedure of two stage Op Amplifier, Compensation of Op-Amplifier, Frequency response of Op-Amplifier, Gain Boosting, Comparison of various topologies, slew rate, Offset effects, PSRR	10

<b>Course Objectives:</b>							
<b>This course aims at enabling students,</b>							
<ol style="list-style-type: none"> <li>To provide a comprehensive understanding of real-time operating systems</li> <li>To equip with the necessary skills and knowledge to develop real-time applications</li> <li>To foster critical thinking and problem-solving abilities for evaluating real-time system requirements, constraints, and performance metrics</li> </ol>							
<b>Course Outcomes:</b>							
After completion of this course, students will be able to,							
<ol style="list-style-type: none"> <li>Demonstrate a comprehensive understanding of real-time operating system (RTOS) fundamentals.</li> <li>Develop proficiency in task management and scheduling.</li> <li>Master the design considerations for real-time systems.</li> <li>Understand the architecture and components of RTOS kernels and gain insights into their internals.</li> <li>Be proficient in analyzing and optimizing real-time systems.</li> </ol>							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Durati on</b>
1.	<b>Introduction to Real-Time Operating Systems</b> Definition and characteristics of real-time systems, Types of real-time systems: hard real-time vs. soft real-time, Basic concepts of RTOS: tasks, scheduling, synchronization, and communication, Examples of popular RTOS: FreeRTOS, VxWorks, QNX, Comparison with general-purpose operating systems,						9
2.	<b>Task Management and Scheduling</b> Task states: ready, running, blocked, terminated, Task creation and termination mechanisms, Task scheduling algorithms: Rate Monotonic (RM), Earliest Deadline First (EDF), Fixed Priority, Round Robin, Preemption and non-preemption scheduling, Task synchronization mechanisms: semaphores, mutexes, condition variables, Inter-task communication mechanisms: message queues, mailboxes, pipes,						9

3.	<b>Real-Time System Design Considerations</b> Memory management in RTOS: static vs. dynamic memory allocation, Memory protection and partitioning, Real-time system constraints: timing requirements, resource limitations, System reliability and fault tolerance, Power management considerations in real-time systems,	9
4.	<b>Real-Time Operating System Kernel</b> RTOS kernel architecture and components: scheduler, memory manager, interrupt handler, Real-time kernel services: task management, scheduling, memory management, Task context switching and stack management, Interrupt handling and real-time responsiveness.	9
5	<b>Real-Time System Analysis and Optimization</b> Timing analysis and worst-case execution time (WCET) estimation, Schedulability analysis and feasibility tests, Performance optimization techniques: priority inheritance, priority ceiling protocol, deadline monotonic analysis, Real-time system debugging and troubleshooting, Case studies and real-world examples of optimized real-time systems.	9

<b>Prior Knowledge of</b> automotive electronics, embedded systems, control systems, and communication engineering, is essential							
<b>Objectives:</b>							
<ol style="list-style-type: none"> <li>To conceptualize automotive electronic technologies for future</li> <li>To deliver knowledge of Signal Processing and Time-frequency transforms required for biomedical processing and data mining, biomedical pre-processing methodologies, instrumentation and its applications.</li> </ol>							
<b>Outcomes:</b>							
After learning the course, the students should be able to:							
<ol style="list-style-type: none"> <li>Understanding fundamentals of ADAS and architectural overview of automotive control systems.</li> <li>Acquire knowledge about Automotive Standards and Protocols and Sensor Technology to ADAS</li> <li>Acquire knowledge of Intelligent transport system and AUTOSAR.</li> <li>Understand concept of bio-electric signals such as EEG, ECG and EMG and its relevance for normal and abnormal state</li> <li>Design real time pre-processing system required for medical signal processing and medical imaging.</li> </ol>							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration</b>
	<b>H</b>						
1.	<b>Automotive Embedded systems , Standards and Protocols:</b> Introduction to functional building blocks of embedded systems, Criteria to choose the right microcontroller/processor for various automotive applications, The need for Protocol, LIN, CAN, KWP2000 & J1939, FlexRay, Test calibration and diagnostics tools for networking of electronic systems like ECU, Vehicle network simulation						<b>8</b>
2.	<b>Sensor Technology for Advanced Driver Assistance Systems:</b> Basics of Advanced driver assistance systems, Radar Technology and Systems, Ultrasonic Sonar Systems, Lidar Sensor Technology and Systems, Camera						<b>10</b>

	Technology, Night Vision Technology, Other Sensors, Use of Sensor Data Fusion, Integration of Sensor Data to On-Board Control Systems	
3.	<b>Intelligent Transportation Systems and AUTOSAR:</b> Vehicle-to-X (V2X) Communication for Intelligent Transportation Systems (ITS), Safety and non-safety applications, Use cases, <b>AUTOSAR</b> : Constituent elements of AUTOSAR, AUTOSAR methodology and implementations Case study : e vehicles	<b>8</b>
4.	<b>Signal processing biomedical signals:</b> Introduction to biomedical sensors: ECG, EEG, EMG, ECG signal origin, ECG parameters-QRS detection different techniques, ST segment analysis. Signal averaging: Basics of signal averaging, Signal averaging as a digital filter, Adaptive Filtering: Introduction, General structure of adaptive filters, LMS adaptive filter, adaptive noise cancellation.	<b>10</b>
5.	<b>Medical Imaging:</b> Magnetic Resonance Imaging: Introduction, principles of MRI and fMRI, MRI instrumentation, image acquisition and reconstruction techniques, Application of MRI. <b>Data Acquisition and Case studies:</b> Introduction, Measurement and Automation Explorer, DAQ Assistants, Analysis Assistants. Biomedical toolkit- ECG signal acquisition & feature extraction, Patient Monitoring Systems, Intelligent Health care system, Telemedicine	<b>9</b>

<b>Prior knowledge of Microprocessor Architecture and VLSI Design flow Is Essential</b>							
<b>Objectives:</b>							
<ol style="list-style-type: none"> <li>1. To explain the System Architecture and Processor Architecture, Processor, Micro Architecture and approach for a SoC Design</li> <li>2. To provide knowledge of Hardware and Software Design flow of SoC Design</li> <li>3. To demonstrate design of SoC based real time application</li> </ol>							
<b>Outcomes:</b>							
After learning the course, the students should be able to:							
<ol style="list-style-type: none"> <li>1. Understand concept of system on chip and significance of SoC design and Modelling.</li> <li>2. Design FSM and Micro-programmed architectures for digital applications.</li> <li>3. Analyze the performance measures of SoC circuits and processor architectures.</li> <li>4. Understand recent trends in Soc Prototyping, Testing and Verification</li> <li>5. Analyze the impact of Platform-Centric Soc Design Approach.</li> </ol>							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration (Hrs)</b>
<b>1.</b>	<b>Basic Concepts of SoC:</b> The nature of hardware and software, data flow modelling and implementation, the need for concurrent models, analyzing synchronous data flow graphs, control flow modelling and the limitations of data flow models.						<b>8</b>
<b>2.</b>	<b>FSM Datapath and Controller :</b> Software and hardware implementation of data flow, analysis of control flow and data flow, Finite State Machine with data-path, cycle based bit parallel hardware, hardware model, FSM Data-path (FSMD), limitations of FSMD. <b>Micro-programmed Architecture:</b> Micro-programmed : control, encoding, data- path, Micro-programmed machine implementation, SOC modelling, hardware/software interfaces.						<b>10</b>
<b>3.</b>	<b>Processor Architectures:</b> Basic concepts in Processor Architecture, More Robust Processors such as Vector Processors, VLIW Processors and Superscalar Processors, Processor Selection for SOC, Memory Design. A SOC controller for digital still camera, portable multimedia system, SoC						<b>9</b>
<b>4.</b>	<b>Soc Prototyping And Verification :</b> Soft Prototyping: Soc Design Flow, Transaction Level Modeling, Hw-Sw Co-Verification, HDL Simulator With HDL Processor Model, Hard Prototyping: Classification Of Hard Prototyping, Requirements Of Hard Prototyping, Examples Of Conventional Hard Prototyping System, Issues On Hardware/Software Co-Emulation						<b>10</b>

<b>Objectives:</b>							
<ol style="list-style-type: none"> <li>1. To prepare the student to be an entry-level industrial standard ASIC or FPGA designer.</li> <li>2. To give the student an understanding of issues and tools related to ASIC/FPGA design and implementation.</li> <li>3. To give the student an understanding of basics of System on Chip and Platform based design</li> </ol>							
<b>Outcomes:</b>							
After learning the course, the students should be able to:							
<ol style="list-style-type: none"> <li>1. Understand the design flow of different types of ASIC.</li> <li>2. Familiarize with different types of methodologies, language, and Tools in ASIC</li> <li>3. Gain knowledge about partitioning, floor planning, placement and routing including circuit extraction of ASIC</li> <li>4. Analyse the trade-offs in ASIC design</li> <li>5. Acquire knowledge about testability in ASIC</li> </ol>							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration h</b>
1.	<b>INTRODUCTION TO ASICS:</b> IC Design Technologies, VLSI Design flow, Programmable ASICs - Antifuse, SRAM, EPROM, EEPROM based ASICs. Programmable ASIC logic cells, I/O cells and programmable interconnects.						<b>8</b>
2.	<b>ASIC Design flow:</b> Introduction to PLDS, ASIC and FPGA Design flows, Top-Down and Bottom-Up design methodologies, Gate arrays, Standard cells, FPGA and their synthesis.						<b>8</b>
3.	<b>ASIC Physical Design:</b> System partition -partitioning – partitioning methods – floor planning – placement – Routing: global routing – detailed routing – special routing – circuit extraction – DRC						<b>10</b>
4.	<b>Trade off in ASIC Design:</b> Introduction to Trade off issues at System Level, Optimization with regard to speed, area and power, asynchronous and low power system design. ASIC physical design issues, SI issues. Parameter extraction with Post layout simulation and Pre layout simulation.						<b>9</b>

5.	<b>Static Timing Analysis:</b> Basics of timing, Basics of STA, Timing paths, Skew, Slack, Timing issues, Maximum Frequency Calculation, Clock domain crossing. <b>Resent trends in ASIC design</b> ASIC Verification and its issues, Types and features of existing available EDA tools. High performance algorithms for ASICS/ SoCs as case studies	<b>10</b>

<b>Prior knowledge of Computer Networks is essential.</b>							
<b>Course Objectives:</b>							
This course aims at enabling students,							
<ol style="list-style-type: none"> <li>1. Understand the fundamentals of Edge Computing.</li> <li>2. Master Edge Infrastructure and Technologies.</li> <li>3. Develop Edge applications and solutions.</li> <li>4. Explore future trends and emerging topics.</li> </ol>							
<b>Course Outcomes:</b>							
After learning the course, the students should be able to:							
<ol style="list-style-type: none"> <li>1. Analyze and Design Edge Computing Solutions</li> <li>2. Evaluate Edge Infrastructure and Technologies</li> <li>3. Develop and Implement Edge Applications</li> <li>4. Analyze Security and Privacy in Edge Computing</li> <li>5. Synthesize Future Trends in Edge Computing</li> </ol>							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration [Hrs]</b>
I	<b>Introduction to Edge Computing</b> Overview of Edge Computing: Definition, principles, and importance. Evolution of computing paradigms: From centralized to distributed to edge. Characteristics and advantages of Edge Computing. Challenges and limitations of Edge Computing.						9
II	<b>Edge Infrastructure and Technologies</b> Edge Infrastructure: Hardware components and architectures. Edge Computing Platforms: Frameworks and middleware for managing edge resources. Networking for Edge Computing: Communication protocols and architectures. Edge Devices: Sensors, actuators, and IoT devices. Edge Software: Operating systems, virtualization.						9
III	<b>Edge Computing Ecosystem</b> Edge Orchestration: Deployment, provisioning, and management of edge resources. Edge Analytics: Real-time data processing, analytics, and machine learning at the edge. Security and Privacy in Edge Computing: Threats, vulnerabilities, and countermeasures.						9

IV	<b>Edge Application Development</b> Programming Models for Edge Computing: frameworks, and APIs. Edge Application Design Patterns: Microservices, serverless, and event-driven architectures. Edge Development Tools and Environments: simulators, and debugging tools. Case Studies: Developing and deploying edge applications in different scenarios.	9
5	<b>Future Trends and Emerging Topics :</b> Edge Computing in Industry 4.0 and Smart Cities. Edge AI: Integration of artificial intelligence and machine learning at the edge. Edge Computing for 5G, Ethical and Societal Implications of Edge Computing.	9
	<b>Total</b>	45

<b>Prior knowledge of:</b> Verilog HDL and Digital Logic Design							
<b>Course Objectives:</b>							
This course will equip students with advanced System Verilog skills and practical experience in digital circuit verification, functional coverage measurement, and Universal Verification Methodology (UVM) design.							
<b>Course Outcomes:</b>							
After completion of this course, students will be able to,							
CO1: Implement test benches in System Verilog to verify digital circuits.							
CO2: Acquire skills in measuring and analysing functional coverage.							
CO3: Develop expertise in designing UVM environments for verifying memory modules.							
<b>Detailed Syllabus:</b>							
<b>Expt. No.</b>	<b>Description</b>						<b>Dur ation</b>
1.	Develop a System Verilog testbench to verify the functionality of a Full Adder digital circuit.						<b>8</b>
2.	Implement a System Verilog testbench to verify the functionality of an Arithmetic Logic Unit (ALU) digital circuit.						<b>8</b>
3.	Develop a System Verilog testbench to verify the functionality of synchronous and an asynchronous Up-Down Counter digital circuit.						8
4.	Create a System Verilog testbench to generate random numbers and evaluate their distribution.						8
5.	Develop a System Verilog program to measure the functional coverage of a BCD to Seven-segment decoder.						8
6.	Develop a System Verilog program to measure the functional coverage of a Serial-in-Parallel-Out (SIPO) register.						8
7.	Design a UVM (Universal Verification Methodology) Environment for an 8-bit adder/subtractor.						
8.	Design a UVM (Universal Verification Methodology) Environment for a RAM (Random Access Memory).						8
	<b>Total</b>						<b>60</b>

**Prior knowledge of:**

Electronics Circuits and Devices **is essential.**

**Course Objectives:**

This course will enable students

1. To illustrate concepts of analog CMOS circuits starting from specifications, design and simulation using circuit design software

**Course Outcomes:**

After learning the course, the students will be able to:

1. To model basic analog IC building blocks like current sinks, current source, current mirrors.
2. To design and simulate different types of basic amplifiers

**Detailed Syllabus:**

<b>Expt. No.</b>	<b>Description</b>	<b>Duration</b>
1.	To study different types of MOSFET models and analyze their performance	4
2.	To design and simulate CMOS subcircuits	8
3.	To design and simulate CMOS current and voltage references	8
4.	To design CMOS single stage amplifiers	8
5.	Design and simulate CMOS differential amplifier and calculate UGB, phase margin, CMRR	8
6.	Design and simulate CMOS two stage operational amplifier and calculate on UGB, phase margin, CMRR	12
7.	Miniproject / Case study implementation	12
<b>Total</b>		<b>48</b>

<ol style="list-style-type: none"> <li>1. Ensure students develop a strong grasp of real-time operating systems (RTOS) fundamentals.</li> <li>2. Foster proficiency in developing, implementing, and debugging real-time applications.</li> <li>3. Empower students with the capability to effectively analyze and optimize real-time system performance.</li> </ol>							
<b>Course Outcomes:</b>							
After completion of this course, students will be able to,							
<ol style="list-style-type: none"> <li>1. Understand real-time operating system fundamentals.</li> <li>2. Develop and debug real-time applications.</li> <li>3. Analyze and optimize real-time system performance.</li> <li>4. Port real-time operating systems and create advanced applications.</li> </ol>							
<b>Detailed Syllabus: Perform any 8 experiments.</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration</b>
1.	Develop an application with two tasks waiting on a timer while the main task loops.						06
2.	Create an application where a task is scheduled upon a button press, demonstrating event sets between an ISR and a task.						06
3.	Demonstrate interruptible ISRs, prioritizing the timer over an external interrupt button.						06
4.	Write applications to test message queues, memory blocks, and byte queues.						06
5.	Develop an application with two tasks to blink different LEDs at different timings.						06
6.	Implement tasks displaying different messages on an LCD display across two lines.						06
7.	Develop tasks to send and receive messages through a mailbox.						06
8.	Create tasks to send messages to a PC through a serial port based on priority.						06
9.	Port Linux and develop a simple application on the embedded platform.						06
10.	Develop an image processing application using Linux OS on the embedded platform.						06

<b>Prior knowledge of Digital CMOS Logic design and HDLs</b>							
<b>Course Objectives:</b> To explore advanced digital and analog circuit design techniques using various technologies and tools.							
<b>Course Outcomes:</b>							
After completion of this course, students will be able to,							
<b>CO1:</b> Design and simulate a CMOS inverter using 90/180 nm technology, evaluating its performance characteristics through transient analysis.							
<b>CO2:</b> Develop an XOR gate using NAND and NOR gates, performing transient analysis to verify its functionality and performance.							
<b>CO3:</b> Design, synthesize, and simulate an 8-bit adder using HDL, estimating power dissipation and validating functionality through simulation and synthesis.							
<b>Detailed Syllabus:</b>							
<b>Expt. No.</b>	<b>Description</b>						<b>Duration</b>
1.	<b>CMOS Inverter Design and Transient Analysis:</b> a) Design a CMOS inverter circuit using 180 nm technology. b) Perform transient analysis to evaluate its performance characteristics.						<b>8</b>
2.	<b>XOR Gate Design Using NAND and NOR Gates:</b> Design an XOR gate using NAND and NOR gates. Perform transient analysis to verify its functionality and performance						<b>8</b>
3.	<b>CMOS Transmission Gate Design and Analysis:</b> a) Design a CMOS transmission gate using 180 nm technology. b) Perform all necessary analyses to verify its characteristics (e.g., transient, DC, AC).						<b>8</b>
4.	<b>Modulo-6 Counter Implementation with Scan:</b> Implement a modulo-6 counter with full scan and mux-DFF elements.						<b>8</b>
5.	<b>Design of an 8-Bit Adder Using HDL:</b> a) Design an 8-bit adder using HDL (e.g., Verilog or VHDL).						<b>8</b>

	b) Simulate the design, synthesis it for the target technology, and estimate power dissipation.	
6.	Layout generation, DRC and LVS Checking, Parasitic Extraction and resimulation of CMOS Inverter.	<b>8</b>
7.	<b>PSPICE Simulation of Analog Circuits:</b> a) Design a simple 5-transistor differential amplifier. b) Perform PSPICE simulation to measure gain, bandwidth (BW), output impedance, input common-mode range (ICMR), and common-mode rejection ratio (CMRR). c) Design and simulate a ring oscillator using PSPICE	<b>8</b>
8.	<b>Post-Placement and Routing (P&amp;R) Simulation:</b> For the design in Experiment 7b (ring oscillator): a) Perform floor planning, placement, and routing (P&R). b) Perform power and clock routing. c) Conduct post-P&R simulation to validate the design's functionality and performance.	<b>8</b>

**Course Objectives:** To provide diversified knowledge and skills in a single platform

- To provide opportunity to students to explore new areas of interest
- To foster student engagement in self-learning

**Course Outcomes:** After learning the course, the students will be able to:

- To acquire knowledge about various technical domains.
- To apply domain experiences in solving real life problems.

**Guidelines for Students:**

Individual students can register for MOOC courses related to their area of interest to conduct their project work.

**A. Selection of Course:**

- Students can select any MOOC Course from an Online Certification provider with guidance from MOOC Mentor.
- The selected course should not be from courses offered in the program curriculum earlier.
- The selected MOOC course should be approved by the Department.
- The selected course should be from NPTEL / Coursera / Udemy/Any foreign University approved course.
- Certification and Grade report is mandatory for the course to be selected.

**B. Duration of Course:** A selected course should be of Minimum 25-30 Hrs (or two courses of 15 Hrs each)

**C. Assessment of Course:**

- At the end of Course submission the MOOCs report of 10-15 Pages in hardcopy is mandatory along with certificate of completion.
- Assessment will be done through Certification exam report.
- Assessment will be done by MOOC Mentor.

**Evaluation Guidelines and Rubrics:**

- MOOC Mentor will observe the progress of the student.
- Students will be evaluated progressively for a total 100 Marks. (i.e. 70 Marks Progressive and 30 Marks Completion of Certificate) and scale down to 50 marks.

Sr. No.	Rubrics	Marks
1	Presentation of the topic Selected	20
2	Scores of Assignments	50
<b>Total Marks</b>		<b>70</b>

The **30** marks will be based on Certification Completion.

**Course Outcomes:**

After learning the course, the students should be able to:

1. Survey the existing research and analyze the outcome
2. Produce good quality reports based on existing research.
3. Present a summary of existing methods and their significance in specific research areas.

**Guidelines:**

1. Under the supervision of a designated guide, each student must study current trends in the fields of VLSI and embedded systems.
2. Students can select an embedded system or VLSI topic based on current trends and the significance of the topic to society or individual.
3. A comprehensive review of the literature, mathematical modeling using a specific technique, and a useful conclusion are anticipated from the seminar research.
4. The expected research outcome of the seminar is the publication of the paper.
5. As part of their term work related to the subject, students must prepare a seminar report and submit it.

**Rubrics For Seminar Evaluation:**

	<b>Criteria</b>	<b>Weightage</b>
<b>1</b>	<b>Topic</b>	<b>10</b>
<b>2</b>	Literature Review	<b>10</b>
<b>3</b>	Subject Knowledge	<b>20</b>
<b>4</b>	Presentation: Presentation Skills , Interaction , Appearance , Organization of data	<b>40</b>
<b>5</b>	Conclusions and Future Scope	<b>10</b>
<b>6</b>	Report	<b>10</b>
	Total weightage	<b>100</b>

**Detailed Syllabus:**

<b>Seminar Activities</b>		
<b>Sr. No.</b>	<b>Activity</b>	<b>Duration</b>
<b>1.</b>	Week 1 &3 : Guide allotment, finalization of topic, Planning of the work. Review-1 conduction	<b>6</b>
<b>2.</b>	Week 4&5: Literature review, Specification and Methodology Finalization, of detail topic.	<b>4</b>
<b>3.</b>	Week 6& 8: Detail Topic Mathematical model, methodology and findings Review-2 conduction	<b>6</b>
<b>4.</b>	Week 9&10 : Comparison of detail topic with other existing methods	<b>4</b>
<b>5.</b>	Week 11 & 12: Seminar Report writing and publication or copyright planning Final Review conduction.	<b>4</b>
	<b>Total</b>	<b>24</b>

<b>Program:</b>	M. Tech (All branches)			<b>Semester :</b>	II		
<b>Course :</b>	Skill Development Lab (Oral and Communication skills)			<b>Code :</b>	MET22VS01		
<b>Credits</b>	<b>Teaching Scheme (Hrs./Week)</b>			<b>Teaching Scheme (Hrs./Week)</b>			
	<b>Lecture</b>	<b>Practical</b>	<b>Tutorial</b>	<b>TW</b>	<b>P R</b>	<b>OR</b>	<b>Total</b>
1	-	2	-	50	--	--	50

**Prior Knowledge:** Basic Communication skills

**Objectives:**

1. To facilitate holistic growth
2. To make the students aware about the significance of Soft Skills and English Aptitude
3. To develop the ability of effective communication through individual and group activities
4. To expose students to right attitude and behavioral aspects and build the same through various activities

**Outcomes:**

After learning the course, the students should be able to:

1. Express effectively through verbal/oral communication skills
2. Prepare for group discussions/meetings/interviews and presentations
3. Operate effectively in multidisciplinary and heterogeneous teams through the knowledge of teamwork, inter personal relationships, conflict management, and leadership activities.

**Guidelines :**

1. Total of 6 assignments out of 8 are to be carried out.

**Detailed Syllabus:**

**Skill Development Lab**

<b>Expt.</b>	<b>Description</b>	<b>Duration (Hrs.)</b>
1.	<b>Group Discussion:</b> Make students aware of proper and globally accepted ethical ways to handle work, colleagues, and clients. Develop group communication skills. Learn to speak up one's opinion in a forum. Cultivate the habit of presenting solution-driven analytical arguments making them contributors in any team.	2
2.	<b>Public Speaking:</b> Any one of the following activities may be conducted: <b>1. Prepared speech</b> (Topics are given in advance, students get 10 minutes to prepare the speech and 5 minutes to deliver.) <b>2. Extempore speech</b> (Students deliver speeches spontaneously for 5 minutes each on a given topic)	2
3.	<b>Writing An Article On Any Social Issue:</b> Build writing skills, improve language and gain knowledge about how to write an article/ report	2
4.	<b>Reading and Listening skills:</b> The batch can be divided into pairs. Each pair will be given a article by the facilitator. Each pair would come on the stage and read aloud the article one by one. After reading by each pair, the other students would be asked questions and needful corrections in the article. The facilitator can evaluate the students for reading and	2

	listening skills.	
5.	<b>Debate On Current Affairs/ Social Relevance Topics:</b> Cultivate the habit to present forceful arguments while respecting the opponents perspective and enhance verbal skills.	2
6.	<b>Telephonic etiquettes:</b> To teach students the skills to communicate effectively over the phone. Students will be divided into pairs. Each pair will be given different	2
7.	<b>Email etiquettes:</b> To provide students with an in-depth understanding of writing formal emails.	2
8.	<b>Mock interviews:</b> Guide students and conduct mock interviews	2
	<b>Total</b>	16
<b>Text Books:</b>		
<ol style="list-style-type: none"> <li>1. BarunMitra, Personality Development and SoftSkills</li> <li>2. <i>Stephen Lucas, The Art of PublicSpeaking</i></li> </ol>		
<b>Reference Books:</b>

<b>Program: M.Tech (E&amp;TC)-VLSI and Embedded Systems</b>				<b>Semester: II</b>			
<b>Course : Mini-Project / Case Study Analysis</b>				<b>Code : MET22EL02</b>			
<b>Credits</b>	<b>Teaching Scheme (Hrs./Week)</b>			<b>Evaluation Scheme</b>			
	<b>Lecture</b>	<b>Practical</b>	<b>Tutorial</b>	<b>TW</b>	<b>PR</b>	<b>OR</b>	<b>Total</b>
3	-	6	-	50	--	50	100
<b>Prior Knowledge of</b> 1. Basics of Electronics Circuits, VLSI and Embedded 2. Basics of C, MATLAB, VHDL <b>Is Essential.</b>							
<b>Objectives:</b> 1. To make aware of —Product Development Process“ including budgeting through Mini Project /case study. 2. To introduce build, design and implement process for real time application using available platforms. 3. To inculcate problem solving and analyzing skills through case study							
<b>Outcomes:</b> After learning the course the students should be able to: 1. Understand, plan and execute a Mini Project / Case study. 2. Study and Design real time problems. 3. Prepare a technical report based on the Mini project case study. 4. Deliver technical seminar based on the Mini Project/ case study work carried out.							
<b>Guidelines Mini Project :</b> <ol style="list-style-type: none"> <li>1. Individual student need to design and demonstrate Mini-project under the guidance of allocated guide.</li> <li>2. Students can choose platform of VLSI or Embedded system considering their future implementation in Major Project in second year</li> <li><b>3. The hardware implementation on the board and software simulation is compulsory.</b></li> <li>4. Mini-Project Report should be submitted as a compliance of term work associated with subject.</li> <li>5. Paper publication associated with mini-project as research outcome is appreciable.</li> <li>6. Mini-project work preferably should be completed in laboratory.</li> <li><b>7. Students should spend 45 hours for experimentations</b></li> </ol>							
<b>Guidelines Case Study:</b> <ol style="list-style-type: none"> <li>1. Select Topic which may belongs to existing application/ product/research/ Tools/Society Problem and analysis it on the basis of its impact on community.</li> <li>2. The Analysis based case study must be conducted by students</li> <li>3. Statistical Analysis is appreciable.</li> <li>4. Prepare a paper justifying your analysis and publish in conference.</li> <li><b>5. Students should spend 45 hours for experimentations</b></li> <li><b>6. Submission of case study report is compulsory.</b></li> </ol>							

<b>Detailed Syllabus:</b>		
<b>Integrated Mini-Project</b>		
<b>Sr. No.</b>	<b>Activity</b>	<b>Duration (Hrs)</b>
1.	Week 1 &2 : Mini-project/ Case study guide allotment, finalization of topic and platform, Planning of the work	<b>8</b>
2.	Week 3&4: Literature review and specification and Methodology Finalization, Review 1 for finalization of topic and specification.	<b>8</b>
3.	Week 5&6 : Simulation of Idea on appropriate software tools and finalization of hardware platform	<b>8</b>
4.	Week 7 &8 : understanding platform implementation and related software flow and execute block level design , Review 2 to understand the progress of the project/ case study	<b>8</b>
5.	Week 9 & 10: Mini Project Report writing and publication or copyright planning and execution.	<b>6</b>
6.	Week 11&12: Demonstration of Project work and Final Review for submission and term work compliances./ case study seminar	<b>7</b>
	<b>Total</b>	<b>45</b>

**Syllabus**  
**Semester -III**  
**First Year M. Tech.**  
**E&TC Engineering**

<b>Program</b>	M.Tech. E&TC-VLSI and Embedded Systems			<b>Semester</b>	III		
<b>Course</b>	<b>Dissertation Phase – I</b>			<b>Code</b>	MET23EL03		
<b>Credits</b>	<b>Teaching Scheme (Hrs./Week)</b>			<b>Evaluation Scheme and Marks</b>			
	<b>Lecture</b>	<b>Practical</b>	<b>Tutorial</b>	<b>TW</b>	<b>PR</b>	<b>OR</b>	<b>Total</b>
16	-	32	-	200	-	100	300

**Prior knowledge of:**

1. Basics of VLSI and Embedded System Concepts
2. Basics of Programming Languages

**is essential**

**Course Objectives:**

This course will enable students

1. To make student expert in software and hardware co-design .
2. To engage in independent research, apply theoretical concepts to practical problems, and make a meaningful contribution to the field of study.

**Course Outcomes:**

After learning the course, the students will be able to:

1. Identify a realistic problem of societal, industry, or research relevance.
2. Compare the literature to find the most appropriate and feasible solution for the selected problem statement.
3. Apply the research methodology tools for data collection and analysis.
4. Design real-life applications considering Emerging areas in technology

**Guidelines:**

1. Students should get the approval of authorities for dissertation title.
2. Students shall provide an overview of the research problem, its significance, and the objectives of the study. Briefly discuss the background literature and highlight the gap your research aims to address.
3. Students shall conduct a comprehensive review of relevant literature and research in the chosen field. Critically analyze existing work and identify gaps, controversies, or areas needing further exploration.
4. Students shall describe the research methodology he/she intend to employ. This includes detailing the research design, data collection methods, tools or instruments to be used, and any statistical techniques for data analysis.
5. Students should outline the specific tasks or activities he/she plan to undertake in Phase I of your dissertation. This may include literature survey, preliminary data collection, feasibility studies, or development of prototypes.
6. Student should clearly articulate the expected outcomes or contributions of the research.

7. Students shall develop a realistic timeline for completing Phase I of their dissertation. They can break down the tasks into smaller milestones and allocate time for each activity.
8. Students shall identify the resources they need to carry out their research effectively. This may include access to databases, laboratory facilities, equipment, or software tools.
9. Student need to design and demonstrate project under the guidance of allocated guide.
10. Sponsored Project Internship is acceptable considering postgraduate scope.
11. Project Report-1 should be submitted as a compliance of term work associated with the subject.
12. At least 1 Paper publication is expected as research outcome of Project Stage-I (Scopus indexed Conference or Journal) and 40% of planned project work should be completed for submission of Dissertation Phase-I.
13. Total Duration: 240 hours are contact hours with guides and for reviews; 240 hours are expected to be spend by student to satisfy all project requirements and implementation

### Detailed Syllabus

Assignment No.	Description
1.	Week 1, 2, 3: Guide allotment, applying for sponsorship and project internship, finalization of topic and platform, Planning of the work.
2.	Week 4,5,6: Literature review, Specification and Methodology Finalization, Review 1 for finalization of topic and specification
3.	Week 7, 8,9: Understanding platform for implementation and related software flow and execute block level design , Review 2 to understand the progress of the project
4.	Week 10,11: Simulation of proposed methodology on appropriate software tools and finalization of hardware platform
5.	Week 12, 13, 14, 15: Project Report writing and publication or copyright planning and Execution. Demonstration of Project work and Final Review for submission and term work compliances

<b>Program</b>	M.Tech. E&TC- VLSI and Embedded Systems			<b>Semester</b>	III		
<b>Course</b>	<b>Research/ Industry Internship</b>			<b>Code</b>	MET23EL04		
<b>Credits</b>	<b>Teaching Scheme (Hrs./Week)</b>			<b>Evaluation Scheme and Marks</b>			
	<b>Lecture</b>	<b>Practical</b>	<b>Tutorial</b>	<b>TW</b>	<b>OR</b>	<b>PR</b>	<b>Total</b>
4	-	8	-	100	-	-	100
<b>Prior knowledge of:</b> Basics of programming language such as Java, MATLAB, Python etc							
<b>Course Objectives:</b> This course will enable students <ol style="list-style-type: none"> <li>To provide the opportunities to learn, understand and sharpen the research acumen, as well as the communication/ technical/managerial skills required for conducting research.</li> <li>To enhance their problem-solving and critical-thinking abilities.</li> <li>To provide an opportunity to the students to carry out research in a real work environment with supervisor guidance over a specific period.</li> <li>To familiarize students with research methods, analytical tools and techniques along with their appropriate usage.</li> </ol>							
<b>Course Outcomes:</b> After learning the course, the students will be able to: <ol style="list-style-type: none"> <li>Develop the ability to learn the concept of Literature Review, Technical Reading, critical evaluation, Attributions and Citations.</li> <li>Identify and apply the algorithm or mechanism to solve the research problem.</li> <li>Adapt Ethics in Engineering Research.</li> <li>Prepare a technical report based on the results obtained.</li> </ol>							
<b>Guidelines:</b> <ol style="list-style-type: none"> <li>Individual student need to attempt for research internship under the guidance of allocated supervisor.</li> <li>Student can do research internship in the industry or in the institute under guidance of allocated supervisor.</li> <li>Student doing research internship in the industry can work on the problem statement provided by the industry. For student doing internship in the institute, supervisor will assign a research task (problem statement or part of funding proposal).</li> <li>Student is supposed to provide a feasible solution to the assigned problem statement.</li> <li>Student will synthesize research findings by drafting a research report.</li> <li>Three reviews will be scheduled to assess progress of the research work. Review-I: Student will present current state of the art of the literature for the assigned research task. Review-II: Explanation of the partial results obtained through implementation of the proposed algorithm is expected. Review-III: Demonstration and explanation of the complete solution of the assigned research task is expected.</li> <li>Student should try to publish the results in the reputed journal or register a patent.</li> <li>Student is supposed to submit research internship report as a compliance of term work associated with subject.</li> </ol>							

<b>Detailed Syllabus</b>	
<b>Assignment No.</b>	<b>Suggested List of Assignments</b>
1.	Assignment of research task <ul style="list-style-type: none"> <li>● Presentation of domain knowledge in the interested area of research</li> <li>● Guide allotment</li> <li>● Assignment of research task by supervisor</li> </ul>
2.	Finalize problem statement and define objectives
3.	Conducting critical literature review: Selection of appropriate research papers Critical reading and thinking Comparative analysis of the papers Finding a research Gap
4.	Review-1 (Will be conducted in Week 5-6): Expectation: Discussion on the problem statement and defined objectives
6.	Data Collection: Techniques of data collection. Sources used for Data collection, creation and publishing own Data Sets if required
7.	Implementation of the problem statement: Identification of technology/methodology/algorithm, system architecture, flow diagram, mathematical modeling, front end, back end
9.	Review-2 (Will be conducted in Week 11): Expectations: Discussion on methodology, system architecture, implementation and partial results.
10.	Result Analysis and discussion
11.	Write a research paper/funding proposal/patent draft. Software for paper formatting like LaTeX/MS Office etc can be used Citing styles and tools such as Google scholar, Mendleyetc Reference Management Software like Zotero/Mendeley

**Syllabus**  
**Semester -IV**  
**First Year M. Tech.**  
**E&TC Engineering**

<b>Program</b>	M.Tech. E&TC-VLSI and Embedded Systems			<b>Semester</b>	IV		
<b>Course</b>	<b>Dissertation Phase – II</b>			<b>Code</b>	MET24EL05		
<b>Credits</b>	<b>Teaching Scheme (Hrs./Week)</b>			<b>Evaluation Scheme and Marks</b>			
	<b>Lecture</b>	<b>Practical</b>	<b>Tutorial</b>	<b>TW</b>	<b>PR</b>	<b>OR</b>	<b>Total</b>
18	-	36	-	250	-	100	350

**Prior knowledge of:**

1. Basics of VLSI and Embedded Systems Concepts
2. Basics of Programming Languages

**is essential**

**Course Objectives:**

This course will enable students

1. To understand the Hardware and Software Co-design Development Process.
2. To conduct original research, contribute new knowledge or insights to the field, and demonstrate mastery of the subject matter.

**Course Outcomes:**

After learning the course, the students will be able to:

1. Develop a prototype based on the design of the project.
2. Analyze and synthesize research findings to the agreed area of research.
3. Evaluate the methods and knowledge to solve the specific research problem.
4. Write thesis/report based on evaluation and analysis undertaken.

**Guidelines:**

1. Semester III major project is continued to be completed in this section under the guidance of allocated project guide.
2. Hardware Interfacing is compulsory for this submission
3. Provide a brief recap of the research problem, objectives, and methodology outlined in Phase I. Highlight any adjustments or refinements made based on Phase I feedback.
4. Detail the steps taken to implement your proposed solution or research methodology. This may involve software development, prototype construction, experimental setup, or data collection procedures.
5. Describe the experiments or studies conducted to test your hypotheses or validate your solution. Provide details on the experimental setup, data collection methods, and any variables or parameters investigated.
6. Present the results of your experiments or studies in a clear and organized manner. Use tables, charts, graphs, or other visual aids to summarize your findings. Analyze the data to draw meaningful conclusions and insights.

7. Interpret the results of your research in the context of existing literature and theoretical frameworks. Discuss any unexpected findings, limitations of your study, and implications for theory or practice.
8. If applicable, discuss the validation of your solution or methodology. Address any validation criteria or benchmarks used to assess the effectiveness or performance of your work.
9. Summarize the key findings of your research and their implications. Reflect on how your work contributes to the existing body of knowledge in your field and any future research directions.
10. Reflect on your overall research experience, including challenges faced, lessons learned, and strategies for overcoming obstacles. Discuss any changes in your understanding of the research problem or your approach to solving it.
11. Final Project Report including all process of project should be submitted as a compliance of term work associated with subject and permission to appear for examination.
12. Minimum 2 Paper publications are expected as research outcome of Dissertation Phase - I and II ( Scopus Indexed Conference or Journal) and 100% of planned project work should be completed for submission of Dissertation Phase-II
13. Total Duration: 32 hours/ week are contact hours with guides, implementation, research outcomes and for reviews.

#### **Detailed Syllabus**

<b>Assignment No.</b>	<b>Description</b>
1.	Week1, 2:60 % Work should be completed.
2.	Week 3,4: Software Simulation and Hardware Implementation should be completed.Review I conduction.
3.	Week 5,6,7: Paper Publication should be in process or completed during this week,80% work should be completed.
4.	Week8,9,10: Compliance of 100% work. Review-2 will be conducted
5.	Week11,12: Department Reviews will be conducted to check the quality of project and requirements fulfilment to permit project submission
6.	Week 13,14,15: Project Report writing and copyright planning and execution. Demonstration of Project work and Final Research Review Committee (RRC) reviews will be conducted for submission and term work compliances.

<b>Program</b>	M.Tech. E&TC-VLSI and Embedded Systems	<b>Semester</b>	IV				
<b>Course</b>	Massive Open Online Course (MOOCS)- (Interdisciplinary)	<b>Code</b>	<b>MET24PC07</b>				
<b>Credits</b>	<b>Teaching Scheme (Hrs./Week)</b>			<b>Evaluation Scheme</b>			
	<b>Lecture</b>	<b>Practical</b>	<b>Tutorial</b>	<b>TW</b>	<b>PR</b>	<b>OR</b>	<b>Total</b>
2	-	4	-	50	-	-	50

**Course Objectives:**

1. To provide diversified knowledge and skills in a single platform
2. To provide opportunity to students to explore new areas of interest
3. To foster student engagement in self learning

**Course Outcomes:** After learning the course, the students will be able to:

1. Acquire knowledge about various technical or non-technical domains.
2. Apply interdisciplinary concepts in various fields
3. To analyze the new state- of- art for life-long learning.

**Guidelines for Students:**

Individual students can register for MOOC courses of their interest in III Semester as MOOC Course offered by the institute.

**Selection of Course:**

1. Students can select any MOOC Course from an Online Certification provider with guidance from MOOC Mentor.
2. The selected course should not be from courses offered in the program curriculum earlier.
3. The selected MOOC course should be approved by the Department.
4. The selected course should be from Nptel / Coursera / Udemy/Any foreign University approved course.
5. Certification and Grade report is mandatory for the course to be selected.

**Duration of Course:** A selected course should be of Minimum 60 Hrs (or two courses of 30 Hrs each)

**Assessment of Course :**

1. At the end of Course submission, the MOOCs report of 10-15 Pages in hardcopy is mandatory along with certificate of completion.
2. Assessment will be done through Certification exam report.
3. Assessment will be done by MOOC Mentor.

**Evaluation Guidelines and Rubrics:**

1. MOOC Mentor will observe the progress of the student.
2. Students will be evaluated progressively for a total 100 Marks. (i.e. 70 Marks Progressive and 30 Marks Completion of Certificate)

Sr. No.	Rubrics	Marks
1	Presentation of the topic Selected	20
2	Scores of Assignments	50
<b>Total Marks</b>		<b>70</b>

**The 30 marks will be based on Certification Completion.**

## **Pimpri Chinchwad College of Engineering**

### **Department of Electronics and Telecommunication Engineering**

#### **VISION**

To be recognized as a distinguished department in the field of Electronics and Telecommunication transforming students into competent technocrats by providing an Ethical, Sustainable and Value-Added Quality Education.

#### **MISSION**

1. To create competent Electronics and Telecommunication engineers with Knowledge, Skill, and Attitude by establishing a conducive learning environment.
2. To nurture technical competency, and entrepreneurship skills and promote higher studies through the state-of-the-art facilities for building successful careers.
3. To facilitate research by engaging in projects of industrial requirement and national importance.
4. To impart Life skills, Ethical and Social values for self-sustainability.

### **M.Tech (E&TC)-VLSI and Embedded Systems**

#### **PROGRAM OUTCOMES**

1. An ability to independently carry out research /investigation and development work to solve practical problems
2. An ability to write and present a substantial technical report/document
3. Students should be able to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program
4. Acquire competency in areas of VLSI and Embedded Systems, Design, Testing, Verification and prototype development focusing on applications.
